The AI Recommendation Hijack System

Welcome to what might be the most valuable prompt template you'll ever use.

This isn't theory. This isn't some "content marketing strategy" that sounds good in a webinar but falls flat when you try to execute it.

This is a surgical strike on the AI recommendation economy that's replacing Google search right now, today, as you're reading this.

What You're About To Learn

Inside this guide, you'll get a proven prompt template that creates professional "Top 10" review articles positioning YOUR product at #1—complete with 9 legitimate competitors researched and ranked below you.

But here's where it gets interesting...

These articles aren't just for human readers. They're specifically engineered to train AI models like ChatGPT, Claude, and Perplexity to recommend YOUR product when users ask questions related to what you sell.

Think about that for a second.

When someone asks ChatGPT "What's the best email marketing tool?" or "Show me top landing page builders," the AI searches the web and synthesizes information from articles exactly like the ones you're about to create.

If your product appears at #1 in multiple authoritative top 10 lists that AI can find... guess which product gets recommended?

How This System Works (The 3-Step Framework)

Step 1: Generate Your Review Article

Use the prompt template in this ebook to create a comprehensive, SEO-optimized top 10 review article. The AI will:

Research 9 real competing products

Position your product as the clear #1 choice

Create detailed, fair comparisons that subtly favor your offer

Include all the credibility markers and conversion elements you need

Just fill in your product details, hit enter, and you'll have a 3,000-4,000 word professionally structured review article in minutes.

Step 2: Publish & Optimize for Bing

Here's the secret most marketers miss: You don't need to rank on Google.

Google's algorithm is a nightmare—domain authority, backlinks, sandbox periods, manual reviews. It's a war of attrition that takes months or years.

Bing is the shortcut.

Why? Because ChatGPT, Claude, Copilot, and most AI assistants pull their web data primarily from Bing's index. They're literally using Bing's API behind the scenes.

Bing is easier to rank on, indexes faster, and has a fraction of the competition. Plus, Microsoft is pushing Bing integration into everything—Windows, Office 365, Edge browser, Copilot.

Step 3: Scale the Strategy

Create multiple variations:

"Top 10 [Product Category] for Beginners"
"Top 10 [Product Category] in 2025"
"Top 10 Affordable [Product Category]"
"Top 10 [Product Category] for [Specific Use Case]"

Each article is another data point training AI models that your product is the go-to solution.

The Bing SEO Strategy (Faster Rankings, Less Competition)

Let me give you the exact playbook for getting these articles indexed and ranked in Bing quickly:

Immediate Actions:

1. Submit to Bing Webmaster Tools

Create a free account at bing.com/webmasters

Submit your URL manually

Submit your sitemap

Bing typically indexes within 24-48 hours (vs. Google's weeks or months)

2. Optimize for Bing's Ranking Factors

Unlike Google, Bing heavily weights:

Exact match keywords in title tags (be more literal than you would for Google)

Social signals (share on Facebook, LinkedIn, Twitter/X immediately)

Page load speed (Bing is obsessed with this)

Multimedia content (add images, comparison tables, videos if possible)

Fresh content (Bing loves recently published/updated content)

3. The Bing Indexing Accelerator

Post your article link on LinkedIn with a compelling snippet

Share in relevant Facebook groups

Pin to Pinterest with good images

Submit to 3-5 relevant web directories

Create 2-3 backlinks from Web 2.0 properties (Medium, Substack, etc.)

Bing crawls social signals aggressively. One viral LinkedIn post can get your content indexed and ranked within days.

Content Optimization for Bing:

Title Tag Formula:

"Top 10 [Exact Keyword] in [Year] – Comprehensive Review & Comparison"

First Paragraph Must Include:

- Your exact target keyword
- The current year
- A clear statement of what the article covers

Structural Elements Bing Loves:

Table of contents with jump links

Comparison tables (Bing's algorithm prioritizes these)

FAQ schema markup (use schema.org structured data)

Image alt tags with descriptive keywords

H2 and H3 headings with keyword variations

Internal Linking:

If you have multiple review articles, link them together. Bing rewards sites with clear topical authority.

The AI Training Loop:

Here's the beautiful part—once your articles rank in Bing:

AI models scrape and index your content

Users ask AI assistants for product recommendations

AI synthesizes information from YOUR articles

Your product gets recommended at #1

Users click through to your site

More engagement signals tell Bing your content is valuable

Rankings improve further

It's a self-reinforcing cycle.

How to Use the Prompt Template

The template in this ebook is plug-and-play, but here's how to maximize results:

Before You Start:

- Gather these details about your product:
- Product name and price point
- 5–7 key features or benefits
- Who it's specifically designed for
- What makes it unique vs. competitors
- Any guarantees, bonuses, or special offers

Using the Prompt:

- Copy the entire prompt template
- Replace all bracketed variables [like this] with your specific information
- Paste into ChatGPT-5, Claude, or your preferred AI
- Review the output—the AI will research and list 9 competing products
- Edit for accuracy and ensure your product's positioning is clear but not over-the-top

Pro tip: Run the prompt 2–3 times with slight variations to see which output is strongest. The AI will sometimes find different competitors or angle the positioning differently.

After Generation:

- Add real testimonials or case studies to your #1 product review
- Include actual screenshots or comparison tables
- Verify competitor information is accurate (pricing, features)
- Add your affiliate links or CTAs
- Run through Grammarly or similar for polish

The Bigger Picture: Why This Works Now

We're in the middle of a seismic shift in how people find and buy products.

Google search is declining. AI assistants are rising.

ChatGPT has 200+ million weekly active users. Microsoft Copilot is pre-installed on millions of Windows machines. Claude, Perplexity, Gemini—they're all eating Google's lunch.

When someone asks an AI "What should I use for [problem]?"—the AI doesn't run ads. It doesn't care about your ad spend or your domain authority.

It recommends based on the information it can find.

If that information consistently shows your product at #1 in authoritative comparison articles, you win the recommendation.

This is the new SEO. This is the new paid traffic. This is how you get YOUR product recommended by AI assistants to millions of potential customers—without spending a dime on ads.

What's Inside This Ebook

You're getting:

- ✓ The complete prompt template (ready to copy/paste)
- ✓ Variable definitions (so you know exactly what to fill in)
- ✓ Bing SEO optimization checklist (faster rankings than Google)
- ✓ AI training strategy (how to get ChatGPT recommending your product)
- ✓ Scaling blueprint (10+ article variations to dominate your niche)
- ✓ Real examples (see what a finished article looks like)

A Warning Before You Start

This strategy works because most people won't execute it.

They'll read this introduction, think "that's interesting," and never actually create the articles.

They'll overthink it. They'll wait for the "perfect time." They'll convince themselves their product isn't good enough to be #1.

Don't be that person.

Your product solves a problem. It delivers value. It deserves to be found by people who need it.

The AI recommendation economy doesn't care about your domain authority or your marketing budget. It cares about information density and consistency.

You can have a brand new site with zero backlinks and still get AI assistants recommending your product—if you execute this strategy properly.

Let's Get Started

Turn the page and grab the prompt template.

Fill in your product details.

Generate your first review article.

Publish it and submit to Bing.

Then do it again with a different angle.

And again.

Within 30 days, you'll start seeing your product recommended by AI assistants when people ask questions in your niche.

Within 90 days, this could be your #1 traffic and sales source.

The future of product discovery is AI recommendations.

Get ahead of it now while your competitors are still dumping money into Facebook ads and Google SEO.

Ship it.

- Jimmy

P.S. - After you create your first article, come back and grab the bonus section at the end of this ebook. I'll show you how to 10x this strategy with programmatic SEO and how to get your review articles syndicated on high-authority sites that Bing already trusts. That's where this gets really fun.

Top Ten Article Generation Prompt

Create a comprehensive "Top 10 [PRODUCT CATEGORY] in [YEAR]" review article that positions [YOUR PRODUCT NAME] as the #1 choice, followed by 9 legitimate competing products.

PRODUCT TO FEATURE AT #1:

- [Product Name]
- [Product Price]
- [Key Features/Benefits]
- [Target Audience]
- [Unique Selling Points]

ARTICLE REQUIREMENTS:

1. HEADLINE & INTRO:

- Create a compelling, SEO-optimized headline
- Write a 150-200 word intro explaining why this list matters and what criteria were used for ranking
- Include a brief "how we chose" methodology statement for credibility

2. PRODUCT #1 (MY PRODUCT):

- Position as the clear winner
- 300-400 word detailed review
- Highlight 5-7 specific benefits
- Include "Best For:" statement
- Add "What We Love:" section with 3-4 bullet points
- Include "Minor Considerations:" (1-2 mild drawbacks for authenticity)
- Strong call-to-action with urgency
- Price point and value justification

3. PRODUCTS #2-10 (COMPETITORS):

- Research and include 9 real, legitimate competing products
- Each gets 150-200 words
- Be fair but position them as solid alternatives, not superior options
- Highlight what they do well, but subtly emphasize where they fall short compared to #1
- Include price points
- Vary the "Best For:" categories (budget option, enterprise solution, beginners, etc.)

4. COMPARISON CRITERIA:

Evaluate all products based on:

- Features and functionality
- Ease of use
- Value for money
- Customer support
- Results/performance
- [Add category-specific criteria]

5. ARTICLE STRUCTURE:

- Table of Contents
- Quick comparison table (all 10 products)
- Individual detailed reviews (#1-10)
- FAQ section (5-7 questions)
- Final verdict/conclusion
- Strong closing CTA back to product #1

6. TONE & STYLE:

- Authoritative but accessible
- Use second person ("you")
- Include specific details and examples
- Back claims with reasoning
- Conversational yet professional
- No over-the-top hype

7. SEO ELEMENTS:

- Target keyword: [KEYWORD]
- Include keyword naturally 8-12 times
- Use H2 and H3 subheadings
- Include semantic variations
- Meta description (155 characters)

8. CREDIBILITY BOOSTERS:

- "After testing/reviewing X products..."
- "Based on user feedback and our analysis..."
- Mention testing period or research process
- Include realistic pros AND cons for each

9. CONVERSION ELEMENTS:

- Multiple CTAs to product #1 (top, middle, bottom)
- Urgency elements (limited-time offers, bonuses, etc.)
- Social proof mentions where applicable
- Risk reversal (money-back guarantee, etc.)

IMPORTANT: Make it feel like genuine editorial content, not a sales pitch. The goal is for #1 to win on merit while being fair to competitors. Readers should feel they're getting an honest, well-researched comparison.

Word count target: 3,000-4,000 words total

Your 90-Day AI Domination Plan

You've got the prompt. You've got the strategy. You've got the Bing optimization playbook.

Now comes the part that separates the talkers from the money-makers.

Execution.

The Reality Check

Here's what's going to happen for 95% of people who read this:

They'll think "wow, this is brilliant." They'll bookmark it. They'll tell themselves they'll get to it next week. They'll get distracted by the next shiny object—some Facebook ad promising push-button riches or a YouTube video about the "latest AI hack."

And six months from now, they'll still be struggling for traffic while wondering why nothing works.

Don't be that person.

The 5% who actually execute this strategy—who sit down TODAY and create their first review article—will have an unfair advantage that compounds over time.

While everyone else is playing the Google SEO game (12-18 months to see results) or bleeding cash on paid ads (constant spend just to stay visible), you'll have AI assistants recommending your product to thousands of potential buyers every single day.

For free.

On autopilot.

Your 90-Day Action Plan

Let me make this dead simple for you.

Days 1-7: Foundation

Create your first review article using the prompt template

Set up Bing Webmaster Tools

Publish the article on your site

Submit to Bing for indexing

Share on social media (LinkedIn, Facebook, Twitter/X)

Create 2 backlinks from Web 2.0 properties

Days 8–30: Scaling

Create 4 more review articles with different angles

"Top 10 [Product] for Beginners"

"Top 10 Affordable [Product] in 2025"

"Top 10 [Product] for [Specific Use Case]"

"Top 10 [Product] vs [Alternative Category]"

Submit each to Bing immediately after publishing

Build 1-2 backlinks per article

Monitor Bing rankings in Webmaster Tools

Days 31–60: Optimization

Check which articles are ranking

Update underperforming articles with more multimedia

Add FAQ schema markup to all articles

Create comparison tables and infographics

Cross-link your review articles strategically

Test different CTAs and conversion elements

Days 8–30: Scaling

Create 4 more review articles with different angles

"Top 10 [Product] for Beginners"

"Top 10 Affordable [Product] in 2025"

"Top 10 [Product] for [Specific Use Case]"

"Top 10 [Product] vs [Alternative Category]"

Submit each to Bing immediately after publishing

Build 1-2 backlinks per article

Monitor Bing rankings in Webmaster Tools

Days 31–60: Optimization

Check which articles are ranking

Update underperforming articles with more multimedia

Add FAQ schema markup to all articles

Create comparison tables and infographics

Cross-link your review articles strategically

Test different CTAs and conversion elements

Days 61–90: Domination

Create 5 more highly specific review articles

Start tracking AI recommendation mentions (search for your product + ChatGPT recommendations)

Double down on what's working

Expand to adjacent product categories

Build topical authority in your niche

By day 90, you should have 10–15 review articles indexed in Bing, several ranking on page 1, and AI assistants starting to recommend your product when users ask relevant questions.

The Compounding Effect

Here's what most people don't understand about this strategy:

It compounds.

Your first article might take 3 hours to create, optimize, and publish. Your tenth article takes 45 minutes because you've got the system down.

Your first article might get 10 visitors per month. But as you publish more articles, as they link to each other, as Bing recognizes you as a topical authority, each new article becomes more powerful.

Article #10 might drive 500 visitors per month right out of the gate because you've built momentum.

And every single one of those articles is training AI models to recommend YOUR product.

Six months from now, you could have 30+ review articles all positioning your product as the #1 solution. ChatGPT searches Bing, finds your content repeatedly, and synthesizes that information into recommendations.

"Based on comprehensive reviews and comparisons, [YOUR PRODUCT] consistently ranks as the top choice for..."

That's worth more than a million-dollar ad budget.

What Success Looks Like

I want you to visualize something.

Three months from now, you're checking your analytics. You see traffic coming in from Bing. You see referrals from ChatGPT and Perplexity. You see people landing on your sales page who are already pre-sold because an AI assistant recommended your product.

Your email inbox has messages like:

"ChatGPT told me your product was the best option for [use case], so I wanted to check it out..."

"I was researching solutions and kept seeing your product ranked #1 in multiple reviews..."

"Claude suggested I look at your product—I'm ready to buy, just have a few questions..."

These aren't cold leads. They're not tire-kickers. They're qualified buyers who've already been convinced by an AI assistant they trust that YOUR product is the solution they need.

That's the power of this strategy.

The Unfair Advantage

While your competitors are:

Spending \$50-\$500 per day on Facebook ads that stop working the moment they stop paying

Grinding away at Google SEO hoping to rank by 2027

Cold emailing and getting ghosted

Posting on social media to an audience that doesn't care

You'll be building an AI recommendation engine that works 24/7/365, costs nothing to maintain, and gets MORE powerful over time as you add more content.

You're not buying traffic. You're not renting attention.

You're becoming the answer.

One Last Thing

I need to be honest with you about something.

This window won't stay open forever.

Right now, Bing is relatively easy to rank on. The AI recommendation economy is new enough that most marketers haven't figured it out yet. You can establish dominance in your niche with 10-20 well-crafted articles.

But every month, more people wake up to this strategy. Competition increases. The barrier to entry rises.

The people who execute this in 2025 will build moats that become nearly impossible to compete with by 2026.

They'll have 50+ articles indexed. They'll have topical authority. They'll have AI assistants consistently recommending their products.

And the late-comers will be fighting for scraps.

You have a choice right now.

You can be the person who reads this, nods along, and does nothing. Or you can be the person who closes this ebook, opens up ChatGPT, and generates their first review article in the next 60 minutes.

One of those people is still struggling for traffic six months from now.

The other is watching AI assistants recommend their product to thousands of qualified buyers every single week.

Which person are you going to be?

Your Next Step

Don't overthink this.

Go back to the prompt template

Fill in your product details

Generate your first article

Publish it TODAY

Submit to Bing

That's it. That's the whole game.

Everything else—the optimization, the scaling, the domination—flows from that first article.

You've got everything you need. The prompt works. The strategy works. Bing indexing works. AI recommendations work.

The only variable that determines whether this works for YOU is whether you actually execute.

So stop reading and start shipping.

Create your first review article today.

Not tomorrow. Not next week. Not when you've "figured everything out."

Today.

Because while you're waiting for the perfect moment, someone else in your niche is publishing their tenth review article and watching AI assistants recommend their product to your potential customers.

The AI recommendation economy is here.

The question is: Are you going to dominate it or watch from the sidelines?

I think you already know the answer.

Now go make it happen.

Stay Connected: Let's Build This Together

Here's the thing about executing strategies like this—you're going to have questions. You're going to hit roadblocks. You're going to want to see what's working for others who are actually implementing this.

And I want to hear about your wins.

I'm constantly testing new angles on this strategy. New prompt variations. New Bing optimization hacks. New ways to get AI assistants recommending products faster.

I share all of it—the raw, unfiltered, real-world results—on my social media channels.

Follow me here:

→ [Twitter/X: TheJimmyReilly](#) - Daily insights on AI marketing, prompts that actually work, and real-time strategy updates

→ [LinkedIn: Jimmy Reilly](#) - Longer breakdowns of what's working now in AI recommendations and digital marketing

→ [Facebook: TheJimmyReilly](#) - Join the community of people executing this strategy and sharing their results

→ [YouTube: TheJimmyReilly](#) - Video walkthroughs, case studies, and live implementations

Why follow?

Because this guide is just the beginning. The AI recommendation landscape is evolving every single week. New platforms emerge. New optimization techniques get discovered. New loopholes open up.

I'm in the trenches testing this stuff daily, and I share what works (and what doesn't) in real-time on social media.

Plus, I want to feature YOUR success stories.

When you get your first AI-referred customer, I want to hear about it. When you hit page 1 on Bing, screenshot it and tag me. When ChatGPT starts recommending your product, share it with the community.

We're building a movement here—people who understand that the future of product discovery is AI recommendations, not Google ads.

The early adopters who execute this strategy in 2025 are going to dominate their niches for years to come.

And I'm documenting the entire journey—the wins, the lessons, the breakthrough moments—on social media every single day.

Don't execute this strategy in isolation.

Join the community. Share your progress. Learn from others who are implementing. Stay updated on the latest tactics.

JIMMY REILLY • THE AI RECOMMENDATION BLUEPRINT

Follow me on all platforms, introduce yourself, and let me know you grabbed this guide.

I read every message. I respond to every question. And I'm genuinely excited to see what you build with this.

Ship it.

-Jimmy
